

RD NETWORKS

COMPANY PRESENTATION

A small business offering direct service and tailored solutions.

We provide network infrastructure services for businesses, offices, shops and other premises, from targeted interventions to infrastructure organisation and documentation.

Our service areas

01 Structured cabling

02 Network outlets and RJ45

03 Racks and patch panels

04 Rack organisation and maintenance

05 Fibre optic infrastructure

06 IP CCTV infrastructure

07 Network documentation

08 Remote rack layout planning

09 Small electrical installations

15% off services on your first engagement

The discount applies to services within the agreed scope, with no minimum value. Materials are supplied by the customer. Site visits, travel, tolls and accommodation, where needed, are quoted separately.

About RD Networks

A lean operation addressing real infrastructure needs.

RD Networks is a small business based in Vitória, Espírito Santo, Brazil, with a two-person team. We offer direct communication, a clearly defined scope and solutions suited to each customer's premises, including small jobs.

Our focus

- Small businesses, offices, shops, schools, hotels, clinics, warehouses and corporate premises.
- One-off services, upgrades, expansion and organisation of existing infrastructure.
- Physical installation in coordination with the team responsible for network configuration.
- Documentation to support maintenance, troubleshooting and future growth.

How we work

Assessment — We assess the premises, outlets and equipment.

Quotation — We define scope, labour, materials and conditions.

Execution — We perform the approved work in an organised way.

Validation — We check the work against the contracted scope.

Documentation — We deliver the agreed records and diagrams.

Support — We maintain a channel for adjustments and new needs.

We can focus on physical infrastructure and coordinate with the customer's IT team, integrator or supplier for network configuration, security and systems.

CURRENT AVAILABILITY

Services are currently carried out on weekday evenings (Monday to Friday) and on weekends (Saturday and Sunday), by prior appointment. Times are agreed according to availability and project scope. All times refer to Brasília time (UTC-3).

SERVICE 01

Structured cabling

Installation and upgrades to the physical infrastructure connecting your business equipment.

What the service may include

- Installation of Cat5e, Cat6 and Cat6A UTP cables as required by the project.
- Cable routing through existing pathways and route organisation.
- Termination at connectors, outlets and patch panels.
- Labelling and organisation of network outlets.
- Expansion and maintenance of existing outlets.

Benefits

Organisation • Expansion • Consistency

A scope tailored to your needs

Every site has different quantities, cable routes, equipment and conditions. After the assessment, the quotation defines labour, materials, timing, travel and optional items.

Photograph of Rodrigo's actual technical work.

SERVICE 02

Network outlets and RJ45

Targeted services to install, repair or expand network connections.

What the service may include

- Installation of new network outlets.
- Crimping and replacement of RJ45 connectors.
- Termination at telecommunications outlets.
- Repair of outlets with identified physical faults.
- Basic labelling and organisation of serviced outlets.

Benefits

Targeted work • Defined scope • Priced by quantity

A scope tailored to your needs

Every site has different quantities, cable routes, equipment and conditions. After the assessment, the quotation defines labour, materials, timing, travel and optional items.

Photograph of Rodrigo's actual technical work.

SERVICE 03

Racks and patch panels

Installation and organisation to keep network equipment accessible and labelled.

What the service may include

- Rack mounting and installation according to site conditions.
- Installation and termination of patch panels.
- Installation of cable managers, shelves, blanking panels and accessories.
- Organisation of patch cords and internal cabling.
- Physical repositioning of equipment; configuration only when included in the contract.

Benefits

Access • Maintenance • Labelling

A scope tailored to your needs

Every site has different quantities, cable routes, equipment and conditions. After the assessment, the quotation defines labour, materials, timing, travel and optional items.

Photograph of Rodrigo's actual technical work.

SERVICE 04

Rack organisation and maintenance

Reorganisation of existing racks to improve access, labelling and maintenance.

What the service may include

- Assessment of the current rack condition.
- Organisation of cables and patch cords.
- Labelling of ports, patch panels and equipment when contracted.
- Replacement or addition of cable managers and accessories.
- Recording of the final layout when documentation is part of the service.

Benefits

Less improvisation • Easier access • Visual organisation

A scope tailored to your needs

Every site has different quantities, cable routes, equipment and conditions. After the assessment, the quotation defines labour, materials, timing, travel and optional items.

SERVICE 05

Fibre optic infrastructure

Fibre infrastructure for links requiring reach, capacity and immunity to electromagnetic interference.

What the service may include

- Installation of fibre optic cables along the defined route.
- Organisation in optical distribution frames and suitable enclosures.
- Fusion splicing when included in the scope.
- Labelling and organisation of links.
- Physical infrastructure support for expansion and links between areas.

Benefits

Reach • Organisation • Integration

A scope tailored to your needs

Every site has different quantities, cable routes, equipment and conditions. After the assessment, the quotation defines labour, materials, timing, travel and optional items.

SERVICE 06

IP CCTV infrastructure

Physical infrastructure for IP cameras, NVRs and related equipment.

What the service may include

- Cable routing to camera locations.
- Physical mounting of cameras when included in the scope.
- Crimping and termination of network cables.
- Cable organisation in the rack and near the NVR or PoE switch.
- Coordination with the team responsible for IP configuration, recording and security.

Benefits

Physical infrastructure • Organisation • IT coordination

A scope tailored to your needs

Every site has different quantities, cable routes, equipment and conditions. After the assessment, the quotation defines labour, materials, timing, travel and optional items.

SERVICE 07

Network documentation

Infrastructure mapping that turns cables, ports and equipment into organised information.

- Outlet, socket, patch panel, switch and port mapping table.
- Equipment inventory with identifiers, locations and available technical data.
- Rack mapping and occupancy in rack units (U).
- Topology diagram.
- IP, VLAN, MAC and other information when supplied and included in the scope.
- Floor plan or sketch showing network, CCTV, fibre and access point locations, where applicable.

Illustrative example. Final deliverables depend on the available information and the agreed scope.

SERVICE 08

Remote rack layout planning

Visual and technical planning before rack installation or reorganisation.

The customer supplies measurements, photos and equipment information. We plan rack unit occupancy, equipment positions, cable managers, blanking panels, power distribution and expansion space. Deliverables may include an occupancy list, front and rear views and a technical drawing. Physical installation is quoted separately.

- New rack: plan before purchase and installation.
- Reorganisation: visualise a new equipment layout.
- Expansion: reserve space for future growth.

 - Spare space

Illustrative 22U rack example. Dimensions, depth, weight, power, ventilation and compatibility must be confirmed for the actual equipment. It does not replace electrical design or manufacturer specifications.

SERVICE 09

Small electrical installations

Small electrical services for offices, shops and other commercial premises.

Electrical work can be commissioned independently or alongside a network project.

What the service may include

- Installation of additional electrical outlets in offices and businesses.
- Cable routing and circuit installation according to technical specifications.
- Power supply infrastructure for racks and network equipment.
- Small independent jobs, such as four additional outlets in an office.

A scope tailored to your needs

We assess the premises, equipment power needs and existing installation. Conductor sizes, protection devices, circuits and distribution board work must follow a design or specifications validated by the responsible professional, where required. The quotation confirms materials, execution and safety conditions within our technical capabilities.

Combined projects

Services can be commissioned individually or combined into one delivery.

- Office expansion: new outlets, patch panel, rack organisation and labelling.
- IP CCTV: cabling, termination, mounting and rack organisation.
- New rack: remote planning, installation, patch panels and organisation.
- Reorganisation: assessment, organisation and final documentation.
- Fibre links: cable installation, termination or splicing as agreed.
- Complete documentation: inventory, ports, rack, topology and outlet plan.

What we define in the quotation

- Quantities of outlets, cables, racks and equipment.
- Customer-supplied materials and each party's responsibilities.
- Site visits, travel, tolls, accommodation and mobilisation.
- Estimated schedule and work window.
- Documentation, tests and agreed deliverables.

Firewall, server, managed switch, VLAN, addressing, security and CCTV system configuration is included only when expressly agreed, with the necessary technical capability and authorisation. Basic connectivity tests are not cable performance certification.

Let's discuss your infrastructure

Tell us what you need so we can prepare a proportionate proposal.

Send photos of the premises, the city, an approximate number of outlets or equipment items and a description of the work needed. For network documentation and remote rack planning, the initial assessment can be done remotely.

We provide on-site services in Greater Vitória, Brazil. Other locations in Brazil are assessed by project. For overseas customers we offer remote documentation and planning; on-site work requires assessment of scope, travel, access and local requirements.
